KPIs to Measure During the 12-Step Sales Process — Scoring Definitions

22 KPIs · Aligned to the updated 12-Step Sales Process and the Pivot Points Playbook · Internal Training Use Only

How to Score

Every appointment is scored on all 22 KPIs. Four marks, no in-betweens:

-  Executed — every pass condition met. Not “attempted.” Met.
-  Partial — run, but a pass condition missed. Some KPIs carry an automatic  ceiling: the old pattern executed perfectly still cannot score .
-  Missed — skipped, or run off-methodology.
-  N/A — the situation never called for it (e.g., no shop-around objection landed). The grader notes why. N/A is not a free pass — an objection KPI is only N/A if the objection never surfaced.

Grade the mechanics, not the vibe. A rep can lose a deal and score clean — and close a deal while breaking the process. Score what happened. The KPIs measure execution; the pipeline measures results.

Automatic Fails — Any Step, Any KPI

These override everything else in the appointment:

- Rep quotes anything below full price. Full price is the ONLY price for the rep. Relief comes from the manager via the T.O. chain — Colorado Roof Relief Program only, never invented at the table.
- Pricing presented on a one-legger. A price presented to half the decision unit is a number in a drawer, armed against us.
- Unverifiable stat quoted. 10.7M complaints and the 64% seven-year price move are sourced. Nothing else gets said that dies to a Google search at the kitchen table.
- Financing terms from memory. Screen in hand, terms on screen. A financing promise the paperwork can't match is a cancel waiting to happen.
- Anything manufactured. Fake busywork, fake urgency, fake “information-only” positioning. If it's fake, it corrodes the trust position everything else stands on.
- A senior customer pressured past the family conversation. Invite the family in — always. This is legal exposure in Colorado, not just reputation.

What Changed From the Previous Scoring

The 12-Step update changed HOW several steps execute. Five KPIs now carry new pass conditions — graders scoring the old way will hand out  for the old process:

- KPI 9 — the deck is question-led. Presenting all slides cleanly while broadcasting =  ceiling.
- KPI 15 — the Price & Value Guarantee comes verbatim before the numbers. Skipping it =  ceiling.
- KPIs 16, 20, 21, 22 — mirror-first. FM DJ voice, mirror + 4-second silence BEFORE the acknowledge; the formed question is the fallback, not the lead. Leading with the question =  ceiling.
- KPI 4 — retroactive failure: a third-party name surfacing at close that didn't surface at discovery scores as a KPI 4 break, not a Step 10 break.

- KPI 2 — the one-legger protocol is now part of the pass condition: booking failure logged, no pricing, return visit locked.

KPI 1 — Appointment Start Summary · Pre-Step 1

Measures	Rep logs the pre-appointment summary before knocking: neighborhood scoped, roof trends noted, devices ready, players and purpose of the visit named (who booked, both homeowners confirmed by the CSR).
 Executed	- Summary recorded before first contact. - Players named — both decision-makers expected and confirmed. - Purpose of the visit stated (retail, adjuster, referral partner). - Neighborhood roof trends noted for use in conversation.
 Partial	Summary recorded but missing players or visit context.
 Missed	No summary recorded, or rep arrives without knowing who booked and why.

KPI 2 — Meet & Greet · Step 1

Measures	Verbatim introduction, truck line, goodie bag delivered, request to head inside, booties on. Inside within 5 minutes. One-legger check runs here.
 Executed	- Intro script delivered verbatim — name, company, time-of-visit reference, handshake. - Goodie bag delivered; permission asked to head inside; booties on. - Both decision-makers present — or one-legger protocol engaged: booking failure logged for CSR coaching, full inspection offered, return visit with both homeowners locked with day and time (Scenario 9).
 Partial	Elements skipped (no truck line, no booties, lingered outside past 5 minutes) but rapport intact and inside achieved.
 Missed	AUTOMATIC  — any pricing presented on a one-legger, regardless of everything else in the appointment. Also  : no ask to head inside (driveway presentation).

KPI 3 — Warm Up · Step 2A

Measures	Trust established before business. Opens with the set opener, FORM questions worked from what the rep sees in the home.
 Executed	- Opens with: “So tell me — what’s new with you guys?” - FORM ground covered (Family / Occupation / Recreation / Motivation) using cues from the home. - If a For Sale sign is in the yard, it is named HERE — “I noticed the For Sale sign out front — congratulations. So what’s the goal for our visit today?” (Scenario 7). Waiting until pricing to acknowledge it is a fail on this KPI.
 Partial	Warm-up run but generic — no use of the home’s cues, or opener skipped.
 Missed	Straight to business with no warm-up, or For Sale sign present and never named.

KPI 4 — Question & Answer · Step 2B

Measures	Full Discovery Form run verbatim. Players, timeline, motive, and outside voices surfaced NOW — not at the close.
 Executed	- All Discovery Form questions asked verbatim, including “What’s stopped you from getting this done already?” followed by silence. “Is there anyone else that you’re getting input from about this project?” asked and the

	answer probed — family in the trade included (Scenario 16 surface question). – “When this project is done, what does ‘handled’ look like for you?” captured — this answer feeds the Slide 1 callback and the bridge. – Transition question, permission question, and 30–40 minute time check all delivered.
 Partial	Questions asked but paraphrased, or answers taken without probing.
 Missed	RETROACTIVE  — a third-party name (brother, son, dad, neighbor) surfaces at the close that did not surface here. Score this KPI as the point of failure, not Step 10. Also  : outside-input question skipped.

KPI 5 — Funding Intro · Step 2B

Measures	Funding raised inside discovery, framed as protecting the customer’s time — not as a credit pitch.
 Executed	– Verbatim: “Have you thought about how you are going to fund this project? Do you have money set aside, or would you like to see our promotional funding?” – Delivered conversationally inside the questionnaire flow, before the soft-pull transition.
 Partial	Funding mentioned but rushed, apologized for, or framed as a formality.
 Missed	Funding never introduced before the investigation.

KPI 6 — Funding Preapproval (GoodLeap Soft Pull) · Step 2B

Measures	Soft pull run BEFORE the investigation, framed exactly as scripted.
 Executed	– Transition script delivered: soft pull, zero impact on credit, two minutes, protects everyone’s time. – Pull actually run before the rep gets on the roof. – Later in the appointment, financing terms quoted ONLY from the live GoodLeap screen — never from memory (Scenarios 5, 12 coaching flags).
 Partial	Pull run but after the investigation, or framing rushed.
 Missed	AUTOMATIC  — financing terms promised that the live approval does not show (“nothing until the bonus lands,” “pay it off when it’s comfortable”) — a financing promise the paperwork can’t match is a cancel with extra steps. Also  : pull skipped with a credit-qualified customer.

KPI 7 — Upfront Contract / Expectation Statement · Step 3

Measures	Full expectation statement plus the Safe Space close. This is where later plays get planted.
 Executed	– Expectation statement delivered verbatim — investigation, pictures shared, recommendation, options and prices today, “stranger → friend” exit. – Safe Space close delivered verbatim: “I can take ‘NO’ just as graciously as I can take a ‘YES.’” – If the customer declared “we’re not buying anything today” at the door: accusation audit first (“You’re probably braced for me to spend the next two hours trying to talk you out of that. I’m not going to.”), then the Upfront Contract verbatim (Scenario 8). Never the “I’m only here to give information” line — it contradicts what our own CSR promised.
 Partial	Contract delivered but Safe Space close skipped or softened.

 Missed	No upfront contract, or the “just information” counter used on a pact at the door.
---	--

KPI 8 — Investigation / Discovery Presentation · Steps 4 + 5

Measures	Evidence collected to standard, then presented so the customer diagnoses the problem — not the rep.
 Executed	– 20+ photos minimum, attic AND exterior, plus video. – “Now, what are you feeling after seeing these pictures and videos?” asked — then silence. The customer talks first. – Agreement gained: “I’m afraid a repair is not going to solve this problem. Are we in agreement?” – No-oriented transition delivered: “Would you be against me walking you through everything — the company, the materials, the options — even if at the end the answer is no?”
 Partial	Evidence to standard but the rep analyzes the pictures instead of asking; buy-in assumed rather than confirmed.
 Missed	Under 20 photos, no attic/video where accessible, or presentation skipped and evidence summarized verbally.

KPI 9 — Slide Deck Presentation · Step 6

Measures	QUESTION-LED deck. Every slide ends with a question that hands the floor back. The deck harvests ammunition for the bridge and close — participation is reconnaissance, not rapport.
 Executed	– Slide 1 is a CALLBACK to their Discovery answer — not a re-asked question. – Every slide ends with its harvest question; the customer talks on every slide. – Slide 3: “which of these three have you dealt with?” pulls their history — rep stays quiet through the story. – Slide 5: single pillar pick, then “Why is that so important to you?” — and silence. – Slide 9: all three alignment tie-downs banked (right the first time / cost of waiting / crew over brand). – Only sourced numbers quoted: 10.7M complaints. No roofing-specific percentages, no “National Board of Realtors,” nothing that dies to a Google search at the kitchen table.
 Partial	AUTOMATIC  CEILING — a broadcast deck. All slides shown, content correct, but the rep narrates and the customer listens. Complete delivery no longer equals executed.
 Missed	Deck skipped, or an unverifiable stat quoted (this also breaks the honesty positioning that Slide 6 stands on).

KPI 10 — Cost vs Value · Step 6 (Slide 6)

Measures	Pricing legitimacy established as a published standard before any number exists in the room.
 Executed	– “Have you heard of the Cost vs. Value Report?” asked and the report framed as the Kelley Blue Book of roofing — a published standard, not our numbers. – Revisited at the close whenever a value gap appears (Scenarios 1, 6, 19) — a 2019 expectation meeting a 2026 market is the most common source of the total-price objection; the 64% seven-year move is the sourced number to stand on.
 Partial	Report mentioned but not framed as third-party standard, or never revisited when the value

	gap surfaced at close.
 Missed	Cost vs Value never presented.

KPI 11 — Product Presentation · Step 7

Measures	Customer builds their own roof. Tangible materials, GBB packages, ownership of the choice.
 Executed	- Roof in a bag used — materials in the customer's hands, quality differences shown. - GBB packages presented; the customer is building, not being shown. - Transition delivered: "After seeing these materials, would you settle for anything less for your roof / home?"
 Partial	Materials shown but rep-led; customer never handles or chooses.
 Missed	No physical materials, packages skipped, or product jumped entirely to get to price.

KPI 12 — Final Bridge · Step 8

Measures	Every objection except price and affordability eliminated BEFORE numbers exist.
 Executed	- Verbatim: "Other than the price and affordability, is there any reason why I couldn't get you on the schedule while I'm here?" - Isolation complete: questions answered, nothing left to "think about," no one else to run the decision by (checked against the KPI 4 answer). - Estimate process framed: EagleView transfer, three options, "I cannot manipulate numbers."
 Partial	Bridge asked but a hedge ("well, we'd want to think about it") left standing and carried into pricing.
 Missed	Bridge skipped — prices presented with non-price objections still live.

KPI 13 — Build the Estimate · Step 8

Measures	Estimate built at the table, with the customer, fast.
 Executed	- EagleView measurements transferred into the data form in front of the customer. - Three options built in roughly 5 minutes. - Customer invited to participate in building it.
 Partial	Built at the table but solo and slow — customer disengages.
 Missed	Estimate built away from the customer, or fewer than three options.

KPI 14 — Options Review · Step 9

Measures	Preference and reasoning captured BEFORE any price is shown.
 Executed	- "Out of the 3 packages that we just went over, which one do you feel fits your needs the best?" — answer captured. - "What made you pick that package?" — reasoning captured; this is the language fed back at the re-close. - Compliment delivered regardless of the answer.
 Partial	Preference taken but reasoning never asked — the close loses its ammunition.

 Missed	Prices shown before preference was asked.
---	---

KPI 15 — Price Presentation · Step 9

Measures	Guarantee before numbers. Retail before discounts. Best before Good. Then silence.
 Executed	- Price & Value Guarantee delivered verbatim BEFORE the elephant in the room: shop us until install day; EXACTLY what we do, EXACTLY how we do it, for less, in writing → refund the difference plus \$100. - Retail prices first, Best → Good: “This is what it costs to do it the right way.” - Option re-confirmed, then discounts introduced, Best → Good. - PRESENT PRICES. BE QUIET. On the spouse look (Mum’s the Word, Scenario 10) the silence lasts as long as their conversation does — the 4-second floor does not apply, there is no ceiling.
 Partial	AUTOMATIC  CEILING — guarantee skipped or summarized, even if the price sequence was clean.
 Missed	Discounts led, Good presented first, or the rep filled the post-price silence with one more value point. Reps talk couples out of decisions they had already made — score it as the failure it is.

KPI 16 — Primary Close / Objection Handling · Step 10

Measures	The universal flow, mechanically: FM DJ voice → mirror + 4-second silence → acknowledge → question only as fallback → PRICE → re-close → T.O. chain. Plus correct routing to the pivot scenario.
 Executed	- Close attempted with their benefit and their package: “It sounds like you’re excited to get started, because you told me you want [benefit]...” - Every objection met FM DJ first — no pitch rise when it lands. - Mirror + 4-second silence BEFORE the acknowledge. The formed question fires only if the mirror stalls. - Objection routed to the correct pivot scenario (1-20) and the play run inside the flow. - Every path lands on PRICE, re-close, then T.O. chain. - Third-party objections (Scenarios 16–18) handled to methodology: senior deferring to kids → family invited IN, never worked around. Trade-family → concede price, win on accountability. First-timer citing dad → ownership question, route back to money.
 Partial	AUTOMATIC  CEILING — leading with the formed question instead of the mirror. That is the old pattern.
 Missed	AUTOMATIC  — any discount language from the rep’s mouth (full price is the only price; relief lives in the T.O. chain), voice rising into an argument, or a senior customer pressured past the family conversation. If “you’re being too pushy” lands: full concede, no “but” (Scenario 15) — arguing with it is a fail. In call review, find the timestamp where pushy STARTED, not where it surfaced.

KPI 17 — Call to Manager · Step 11

Measures	The call happens every time, and the commitment comes before the call.
 Executed	Conditional commitment secured BEFORE dialing: their number, their words — “If that were the payment, would we be moving forward while I’m here?” (Scenario 13).

	- Call introduced as service, not asked for: “Let’s take a crack at it and find out what it is.” - Domino / Jenga framing used to explain crew logistics. - T.O. chain respected: Manager → designated second/third → Jose H. - The rep never states the relief is possible — if relief exists, it comes from the manager’s mouth. The only relief architecture is the Colorado Roof Relief Program, through the manager, never invented at the table.
 Partial	Call made but without the commitment first — the manager negotiates against air.
 Missed	No call on a live deal, chain skipped, or the rep pre-announced what the manager would do.

KPI 18 — Cool Down / Next Steps · Step 12

Measures	The sale is taken away, the commitment is stress-tested, and no one leaves without a locked next step.
 Executed	- Take-away resale delivered: why they made the right decision. - Cancel-proofing verbatim: “Before I put this in, I want to be absolutely sure that there is no reason that you may want to turn around and cancel it.” - Reversal risks surfaced out loud — including “my daughter is going to ask why I didn’t call her” (Scenario 17). Better at the table than in a cancellation email. - Not sold: discounted prices taken away, 45-day estimate stated, and the review appointment locked with day and time before walking out (SAMFAM — a follow-up secured in the home beats any outreach after it).
 Partial	Congratulations without the cancel-proofing question, or an unsold exit with only a vague “I’ll follow up.”
 Missed	No cool down on a sold deal, or an unsold exit with no locked next step.

KPI 19 — Appointment End Summary · Post-Step 12

Measures	The appointment is logged so the pipeline math stays honest.
 Executed	- Outcome recorded: sold same-day, active follow-up, credit-denied, or lost — with rapport losses distinguished from price losses. - Objections logged with their pivot scenario numbers — this is what makes drill assignments targeted. - Follow-up appointment (if any) recorded with date and time. - Upstream failures flagged: one-legger bookings, pact-at-door appointments, missing CSR confirmations.
 Partial	Outcome logged but no objection tags or upstream flags.
 Missed	No end summary — the appointment disappears from coaching.

KPI 20 — Objection: Need to Think About It · Cross-step · Scenario 1

Measures	The stall is triaged to its real category — value, affordability, or timing — never argued with.
 Executed	- “Think about it?” + 4-second silence, FM DJ. - “Can I ask — how long do you feel you’d need?” — a serious answer is treated as a buying signal. - Isolated to money with the no-oriented door: “...or is there something else I missed?” —

	never the yes-trap “is that correct?” - Triage run OUT LOUD: value / affordability / timing — “Which one is it for you?” - Routed correctly: value → Cost vs Value + cinch + Triangle; affordability → GoodLeap monthly; timing → Scenario 5. - Same-day policy stall (“we never sign the same day”) → Scenario 4: label the rule, real picture exit only, “Where did you two land?” on return.
 Partial	Stall acknowledged and isolated, but triage skipped — rep guesses the category and runs the wrong play.
 Missed	Rep argues with the stall itself, or manufactures a fake exit (fake busywork corrodes the trust position everything else stands on).

KPI 21 — Objection: Second Opinion / More Estimates · Cross-step · Scenario 2

Measures	Normal buyer behavior, met with criteria surfacing and the guarantee — not with pressure.
 Executed	- “Three estimates?” + 4-second silence. Treated as normal, not as rejection. - Criteria surfaced: “When those bids are side by side — what are you going to use to make the final call?” The rep does NOT feed them the word “value.” - Conditional commitment against their criteria: “If our value holds up... is there any reason you couldn't see yourself being a New Era customer?” - Price & Value Guarantee positioned as the reason it's safe to decide today — they keep shopping us until install, in writing. - If the wall holds: STOP PUSHING. Parachute (Scenario 3) — same respect ask, review visit set for after the last estimate, exit-sell line delivered inside the parachute ONLY.
 Partial	Criteria surfaced but the close reverts to a yes-push (“wouldn't you agree it's easier...”) — that is card language we rejected.
 Missed	Rep keeps closing into a standing wall, or the exit-sell line used early in the appointment (it invites shopping before the wall exists).

KPI 22 — Objection: Shop Around / Competitor Cheaper · Cross-step · Scenarios 3, 11

Measures	The comparison is converted into their own case for us — Triangle, their reasons, the guarantee. Never a discount.
 Executed	- “Cheaper?” + 4-second silence. Read as a buying signal — if they wanted the cheaper bid, they'd have signed it. - Same-price question run: “If both proposals were at the exact same price — who would you choose?” then “Can I ask why?” and “What else?” — silence after each. Their reasons build the case. - Summary in THEIR words, driven to “that's right,” then the no-oriented trade-off: “Would you be comfortable giving those up to save the difference?” - Triangle run when it stalls — pick two of three. Guarantee re-anchored: apples to apples, in writing, refund plus \$100. Cheaper becomes their homework, not our problem. - Written bid produced → scope read line by line. Deltas named (shingle class, decking, ridge vent, workmanship term) without trash-talking the competitor. - Announced pact / stone wall → Scenario 3: accusation audit, hypothetical kept light, land on the number in their mind → PRICE → T.O. chain.
 Partial	Triangle run but the rep argues the value case himself instead of extracting their reasons first.

 Missed	AUTOMATIC  — any move toward matching the competitor's number. Full price; relief is the manager's, via the T.O. chain.
---	--

New Era Roofs • Internal Training • Scoring definitions aligned to the 12-Step Sales Process (updated) and the Pivot Points Playbook. One source of truth per script: quote scripts from the owning document.
